

Our RV Requirements

We have been Blessed to be able to have a wonderful 2014 Fleetwood Bounder 35K Motor Coach for our travel, temporary lodging, storage and office as we conduct programs from one place to another. We do have basic requirements for our coach which include electricity, water and sewer, just like in any home. Below we have listed the specifications for our coach in hopes that a church or hosting facility has the requirements that we would need so that we can park at that location and not need to spend money in an RV park.

Length: 36' 3"
Height: 13'
Width: 8' 6" Slides in / 12' 6" Slides out
Weight: 26,000 lbs

Electricity: 15 Amp, 30 Amp or 50 Amp
Water: Standard water hose
Sewer: Standard 3" or 4" connection

120 Volt 15 Amp

120 Volt 30 AMP

240 Volt 50 AMP

The 50 Amp is preferred for the use of our Air-Conditioners. If we only have 30 Amp available, we then will only have the use of one Air-Conditioner. 15 Amp circuit means we have no Air-Conditioners. No air Conditioning for us in the South in Summer will not work.
